

K2000 MODULAR ROTARY HARROW

The K-Line K2000 Modular Rotary Harrow is a versatile harrow ideal for a wide range of working methods, conditions and soil types.

Rotary action is excellent for stubble management, trash handling and weed control with residue being spread at the top of the soil profile. Unique positioning of the tines on each harrow in 4 spirals improves the leveling and conditioning of the various soil types.

The K2000 Modular Rotary Harrows are easily fitted to most tillage implements with a range of accessories available. They are also ideal for fitting to our 2500 Series Universal Bar for stubble management and small seed establishment.

FEATURES

- ✓ Proven advantages for both minimum till and conventional tillage applications
- ✓ Excellent for stubble retention and weed control – residue spread at top of soil profile
- ✓ Mounted – lifts and folds with your machine
